Product Description

FLEX Ex analog I/O modules provide best utility when used with ControlNet Ex products on the ControlNet network. Data connections are established between the I/O module and an PLC programmable controller to transfer information between the two at a scheduled rate. Input module information is then automatically made available in the PLC data table through the data connection. Reciprocally, output data information determined by the PLC program is also automatically transferred from the PLC data table to the output module through the data connection. In addition, when the data connection is originally established, configuration information for the module is automatically transferred to it via the network.
