Product Description

Our CompactLogix™ and Compact GuardLogix® controllers provide higher performance, increased capacity, improved productivity and enhanced security to help meet the growing demands of smart machines and equipment for manufacturing. These controllers use a common easy-to-use development environment. Tight integration between the programming software, controller and I/O modules reduces development time and cost at commissioning and during normal operation. This commonality provides cost-effective integration of a machine or safety application into a plant-wide control system because it integrates safety, motion, discrete and drive capabilities in one controller.
